

## Storage

Traction batteries and panels in dry status are stored in aired rooms with temperatures from  $-20^{\circ}\text{C}$  to  $+40^{\circ}\text{C}$  packed in original factory packaging. It is not allowed rapid changes in temperature. Batteries and panels are storage at least 1.5m away from heating elements and away from direct sun light. When transporting and storages batteries and panels never storage on top of each other. Recommended storage is 3 months.

Traction batteries and panels which are delivered soaked with acid are stored in rooms with temperatures above  $0^{\circ}\text{C}$  and every month needed to be controlled and charged if necessary. Recommended storage is 3 months.
